

Errata

Issue 17, Summer, 2003, page 22. “A Study of the Combustion Behaviour of Pyrotechnic Whistle Devices (Acoustic and Chemical Factors)”

The word in bold text in the following sentence, which appeared on page 22, had been “high” instead of “low. The **corrected** text follows:

While the experimental data show such a relationship between the mode frequencies (see Figure 2), it does not fit the half-wave resonator model, which yields unrealistically **low** acoustic propagation velocities when calculated as the product of frequency and wavelength, with the wavelength equal to twice the effective chimney length.
